The remedy ALERTS were supposed to be virus and internet scam warnings. This is neither - it's just a suggestion to keep away from Windows 8 until it's ready for prime time.

Windows 8:

I've had a few clients download and install the Consumer Preview (beta version) of Windows 8 - the successor to Windows 7. Shortly after, the same clients had us out to reinstall Windows 7! The beta version of Windows 8 created problems that kept them from doing their work. You never want to be the first one on the block to install new software. This is particularly true when talking about Microsoft and absolute when considering Microsoft beta software. I'm sure Windows 8 will be fine when the full release version is out but, still, don't be in any rush to install it - Windows 7 is doing a pretty good job. In addition, many of the changes in Windows 8 are designed specifically for tablet PCs, smartphones, and touch-screen PCs.

Please give us a call if you have any questions or concerns,

All the best,

Ken & The Team at remedy I.T.
